

Mipa 1K-UV-Dickschichtfüller

Excellent filling power in express time

Mipa 1K-UV-Dickschichtfüller is a high-fill, UV-drying filler for time- and energy-saving refinishing. After just five minutes of irradiation with an UV LED lamp or Hg lamp, it can be sanded down to high layer thicknesses.

- Fast cycle times with low energy costs
- Excellent sandable surface
- Dry coat thickness up to 200 µm achievable (up to 180 µm when using the aerosol)
- Outstanding mechanical and chemical resistance of the filler surface
- Very good adhesion to steel, iron and galvanized substrates
