

Pro Mix® Structure Additives

Flexibly create functional textures

Mipa Pro Mix® Structure Additives allow you to create special textures and haptic effects quickly and easily.

The specially developed powder additives are used in selected Pro Mix® bases (see technical data sheet) and are available in a wide range of grain sizes- starting from very fine-grained to medium-grained to coarse/sharp-edged or elastic/rubber-like. Thus, you can also create functional coatings for very different areas of application.

Körnungen/Grain:

PP 30	fine grain size, very fine	EM 4000	elastic, rubber-like
PP 50	fine grain size, fine	PE 60	fine grain size, fine, hard
PP 150	medium grain size, sharp	CA 1500	round, very coarse
PC 500	edged, sharp	SI 500	sharp-edged, coarse
